

Micro Assignment 1

1) Price of Pizza (₹)	Quantity of Pizza demanded per month
1	10
2	8
3	6
4	4
5	2
6	0

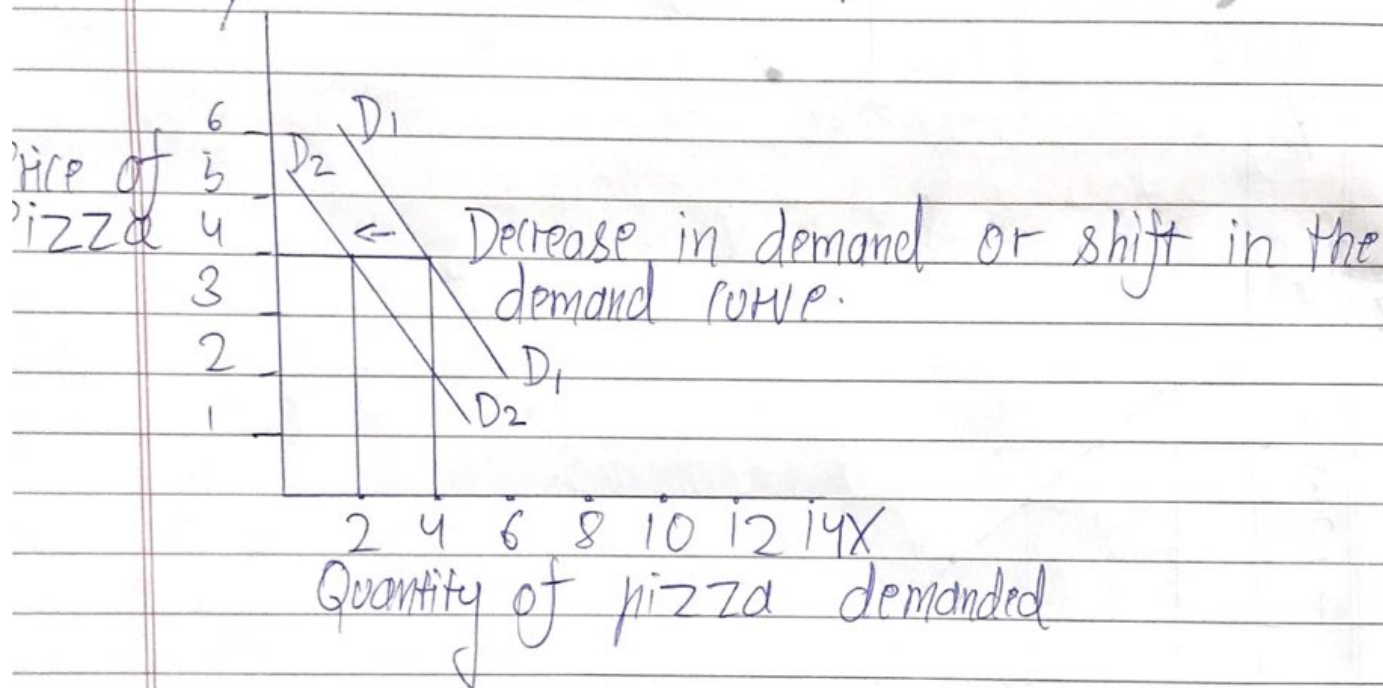

2) If one or more of the factors influencing demand other than price changes, the demand curve shifts. For example, the ICMR finds out that eating pizza is very unhealthy then demand for pizza will decrease.

Example 2: If a student finds out that hygiene standards are not met then too the

demand for pizza will decrease.

In both the cases the demand for pizza will decrease although the price remains the same.

Graph: (drawn from the previous schedule)

3.) No. A change in the price of pizza would not ~~change~~ shift the demand curve because the price must remain the same for a shift in the demand curve.

If the price changes ~~it~~ then it is known as movement along the demand curve and not shift in the demand curve.
